

I am a consultant pathologist with thirty years of experience in anatomic pathology. I specialized as a pathologist at the University of Milan. During my residency I commenced the study of endocrine diseases, focusing particularly on neoplastic and dysfunctional aspects, with a focus on male infertility. I had the privilege of furthering my studies at the University of Pennsylvania, where I studied the morphology and cytology of thyroid neoplasms. My latest scientific papers concern this specific field. I also have an interest in urinary cytology. I am currently collaborating with the Istituto Auxologico Italiano in Milan as the director of the hysto-cytopathological and somatic molecular diagnostic laboratory. I am member of Italian Society of Anatomic Pathology and Italian Cytopathology group.
